

Ordinary Rain Gauge

The 'Virtual' make Non recoding Rain Gauges are manufactured as per IS:5225 :1969. Rain Gauge is manufactured from non corrosive fiber glass reinforced plastic container. It consists of collector assembled with brass Ring, Funnel, Locking Rings and Base. The Rain Gauge is supplied with 2 liter bottle and a measuring cylinder. Rain Gauges are available in 200 sq. cms collection area. The essential parts of an ordinary rain gauge are a funnel through which the rain water is collected in a receiver and a measuring glass (rain measure) with which the rain water collected is measured. The correct type of rain measure suitable to the type of rain gauge in use has to be used for the measurement of rainfall. The rain measure is graduated for every 0.2 mm of rainfall. This instrument is also available with IMD Pune, certification.
